TURBO MUIN SMART B+

elite-it.com

PRECISE, QUIET AND POWERFUL.

TURBO MUIN SMART B+ is a trainer with direct drive and integrated fluid resistance technology, that has become part of the wide range of solutions offered by Elite for indoor training. TURBO MUIN SMART B+ represents the completion of the training data of the Turbo MuiN trainer, with which it shares the same hardware, from which it takes all the pros and strength points, going beyond, with the objective of growing and improving even further.

In design and structure, TURBO MUIN SMART B+ inherits all the characteristics of the direct transmission range trainers of the Elite collection; this gives it great stability and ease of use.

Use is simple and requires few steps.

Just replace the back wheel of the bike with TURBO MUIN SMART B+ and start your training managing the gear speeds as if you were pedalling on the road.

The resistance progressively and automatically increases with the speed produced by the cyclist and the internal flywheel allows a pedalling roundness that matches the road experience perfectly.

This type of trainer is characterized by the direct transmission of the power delivered by the cyclist, since the system is connected to the bicycle chain.

Even if it can be used as a traditional trainer (you position the trainer, fix the bike and pedal freely), in comparison with its predecessor, TURBO MUIN SMART B+ is born Smart, that is with the capacity of sending via wireless ANT+ and Bluetooth communication protocol all the data produced during training. In fact, inside TURBO MUIN SMART B+, there is already the Misuro B+ Sensor that allows sending data such as speed, cadence and power, allowing the cyclist to monitor (on smartphone, tablet, cyclocomputer and compatible browsers, even using third parties' and not just Elite's Apps and software) his/her training and assess his/her performance.

TURBO MUIN SMART B+ is compatible with Elite's My E-Training software and App, the virtual trainer compatible with all Elite trainers, available free for 12 months, but, as previously stated, is also compatible with third parties' App and software.

This allows using TURBO MUIN SMART B+ with other indoor cycling platforms (that normally require a paid subscription), among which the well-known Zwift, TrainerRoad, The Sufferfest, Bikevo, Kinomap and others.

TURBO MUIN SMART B+ is a trainer designed and built on the basis of the requirements of traditional training that, thanks to Smart technology, allows you to enter the web cycling community, where professional training, fun, passion and social merge in just one solution.

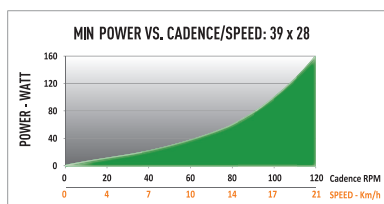

Designed, developed and built following years of experience and also based on the feedback from professional cyclists with whom Elite cooperates, TURBO MUIN SMART B+ is particularly indicated for those disciplined and demanding cyclists that want and know how to manage the rhythm, duration and intensity of their training autonomously, on the road as well as indoors.

A highly professional trainer that, thanks to the modern technology applied, becomes also a tool with which you can enjoy yourself, matching the usefulness and effectiveness of the most traditional training with all the emotions of the web experience, with new challenges and online pedalling, alone or with either real or virtual friends.

WHY CHOOSE TURBO MUIN SMART B+?

- _ It allows managing your performance as during road training, using the gear speeds of your bike.
- _ Integrated Smart technology allows monitoring the data produced and matching training effectiveness with the fun of the online experience, projecting you into the web cycling community.
- _ It is practical to use and manage. It is very stable during training.
- _ It is compatible both with a road and a mountain bike.

FEATURES

HOME TRAINER TYPE

Smart, direct transmission with fluid resistance and integrated Misuro B+ sensor.

WIRELESS COMMUNICATION

ANT+(Power and Speed&Cadence) and Bluetooth (Power and Speed&Cadence)

MAX POWER

1000 Watt (40 km/h) - 2940 Watt (60 km/h)

COMPATIBLE WITH

My E-Training software & app Zwift, Trainer Road, Bikevo, Kinomap, The Sufferfest and more

OUTPUT

Power, speed and cadence (heart rate if connected to a heart rate monitor, not included)

FLYWHEEL

5,9 kg

BIKE COMPATIBILITY

Race bike, Mountain bike and city bike, also carbon ones, with 130x135 x 5mm hubs and with quick clamping system.

CASSETTE COMPATIBILITY

Shimano 9/10/11 speed, Campagnolo 9/10/11 speed. Specific freehub body for compatibility with Campagnolo is also available on www.shopelite.it-com

CONNECTION INDICATOR

No

INCLUDES

12-month free subscription to My E-Training software & app

SPECIFICATIONS

ELECTRICAL REQUIREMENTS

No power supply

SPACE OCCUPIED WHEN UNFOLDED (LXP)

600 x 560 mm

HEIGHT

460 mm

WEIGHT

17 kg
